PLEASE READ FIRST

QUICK SET UP GUIDE 2055D

1. Finding the ideal location for your unit. Do not place the humidifier directly next to a heating or an air vent.
2. The unit should be placed on a dry, level surface. Keep it away from walls, doors or windows.
3. The unit should not be placed too close to plants or other objects. Keep a distance of at least 20 inches (50cm).
4. Place the Ionic Silver Stick in the water base of the unit.
5. Take off the water tank cap to fill the tank with water.
6. Fill the tank with clean, cold water from the tap.
7. Do not pour water directly into the appliance. Use the water tank only.
8. Close the cap of the water tank securely, place the water tank onto the base. The water is now running from the tank into the base. The red empty indicator light may stay illuminated for some seconds until the base is filled with water.
9. Insert the plug into the socket and switch on the appliance using the on/off switch. The blue light comes on.

FILL THE TANK WITH FRESH COLD WATER

QUICK OPERATION DESCRIPTION 2055D

A. On/Off switch (level II / level I)
B. Hygrostat (setting the humidity level)
C. Ionic Silver Stick Exchange Reminder (to reset hold down both Hygrostat buttons)
D. Cleaning Reminder (to reset hold down both Hygrostat buttons)
E. Current relative humidity level and desired / set relative humidity level
F. Empty Indicator
G. Off
H. Level II: Normal mode (high humidity output)
J. Level I: Night mode (regular humidity output)

WATER QUALITY MAINTENANCE WITH IONIC SILVER STICK®

Water Quality Maintenance
The innovative Ionic Silver Stick® (ISS) uses the proven anti-microbial properties of silver, thereby keeping the water free of harmful microbial growth. The ISS gives off silver ions into the water over a period of more than one year. It is self-renewing and requires no maintenance and no power to function.

Lifecycle Indicator
Your appliance comes with a lifecycle indicator for changing the Ionic Silver Stick®. To remind yourself when you put the ISS into operation, please cross the current month on the stamp and write the current year on the line provided.

DO NOT DISCARD! Safe for future reference. Please read the manual or check our website www.airoswiss.net for further information.
FURTHER INFORMATION

RECOMMENDED TO CLEAN WITH EZCal

What is EZCal?
EZCal from AIR-O-SWISS is an easy and safe cleaning and descaling agent recommended for all humidifiers. It cleans mineral build-up in the water base.

Switch off the appliance and unplug it from the socket before cleaning it. Clean the water tank and the base regularly. Use water only, no detergents.

For best results use EZCal custom cleaning agent for AIR-O-SWISS products to remove deposits from the water base regularly. Do NOT run the unit when using EZCal. This can cause damage to the product and voids the warranty.

Do not submerge the main body in water! The cleaning indicator still appears on the display after cleaning. To reset hold down the two hygrostat buttons until the clean light stops flashing. Thoroughly rinse the base with tap water and make sure no EZCal residues remain in the base!

There is a sample of EZCal included in the packaging of your humidifier!

Only use 1 packet for 32oz of water. Do not change the ratio. Thoroughly rinse the base with tap water and make sure no EZCal residues remain in the base. Instructions for use are on the packet. Please note: EZCal from AIR-O-SWISS is the only recommended cleaning and descaling solution. Do NOT use any other cleaning solutions since it can damage the product. Any use of cleaning solutions apart from EZCal will void the warranty.

EZCal descaling agent is available at selected retail stores.

TROUBLESHOOTING

ABOUT THE UNIT

If there is no water left in my water tank, for how many hours will the water in the base last?
• An exact answer cannot be given for this as there are many factors that depend on how long the water will last for. It all depends on the size of the room, if it is very dry, among other things to know how quickly water will evaporate into the air. If you notice that there is no water left in the water tank, it is always a good idea to refill the tank to have extra water available.

I fill the water tank, and when I place it back on the unit all of the water goes into the base. Why is that?
• Water is needed in the base of the unit for the removal of particles from the air, and for the humidification of the air. The first time the tank is filled up and placed on the unit, all of the water will go into the base of the unit. The water tank acts as a reserve, and may be filled up a second time to have extra water available.

Cleaning light is flashing
• Switch off the unit and unplug it. Empty the water in the base. Rinse the base with hot/clean water. Do not submerge the main body! Visually inspect the base for dirt or mineral build up. Depending on the water hardness descaling the water base approximately every 4 weeks with EZ Cal is suggested. Do not forget to reset the cleaning light after cleaning the unit by holding down both hygrostat buttons until cleaning indicator disappears.

Reset cleaning light
• The cleaning light does not automatically reset. Hold down both hygrostat buttons (B) until the cleaning indicator stops flashing. The light automatically comes on approx. after 14 days of plugging in the unit.

Is it ok to put my humidifying discs in the dishwasher?
• The manufacturer of this appliance does NOT recommend it. The discs can only be placed in a dishwasher where the temperature is no greater than 131°F / 55°C. If the temperature is any hotter than this, the discs will melt. Place the plates in a sink filled with warm water and white vinegar or EZCal and either let them soak or spin the plates in this solution. Or, add white vinegar or EZCal to the water in the base of the unit and let the unit run for an hour to clean the plates. It is good to have calcium deposits built up on the plates as it will capture more particles from the air and add more moisture to the air.

For troubleshooting, see chapter «Troubleshooting».

Humidity level is not changing or does not reach the desired humidity level
• If the water tank needs refilling more than once per day, the unit is working properly and the climatic condition in the room has an influence on the humidity.

Reasons for low humidity level:
• air circulation is very high (air is fully exchanged several times per day – the humidifier needs to start its work from scratch)
• insulation of home (see air circulation)
• open space with high ceilings (not only the footage of the room counts but also the height) – high-rise buildings require more humidification.
• open windows – works similar to air circulation (if it is very cold outside don’t open the window more than 2 times per day for 3 minutes)
• big difference between outside temperature and inside temperature – the colder the air the less moisture it is capable to hold and the more the air is heated up the lower is the percentage of relative humidity (= the amount of water vapor in the air, compared to the amount the air could hold if it was totally saturated)
• position of the unit – if it is placed close to a door, window or air vent. This increases the air circulation.

Can this unit be used all year round?
• Yes, the unit can be used all year round. The unit produces relative humidity which means that the air will only take as much moisture as it can hold. The unit will not over-humidify the air.

What is the Ionic Silver Stick (ISS) and how long is it good for?
• The ISS is effective in preventing the growth of bacteria and molds in standing water. It needs to be replaced once a year. The ISS can be used in all AIR-O-SWISS products plus in all other humidifier brands.

Placement of the Ionic Silver Stick
• The ISS is effective in preventing microbial growth in standing water. Please see the quick set up guide for more instructions.

Replacement reminder
• In each ISS box there is an ISS lifecycle indicator. Check the box of the month when starting to use the ISS and write the year on the line indicated. Exchange it after 12 months.

ACCESSORIES

What is EZCal?
EZCal from AIR-O-SWISS is an easy and safe cleaning and descaling solution. Do NOT use any other cleaning solutions since it can damage the product. Any use of cleaning solutions apart from EZCal will void the warranty.

EZCal residues remain in the base!

DO NOT DISCARD! Safe for future reference.
